

BEYOND CELL DELIVERY SYSTEM:

The delivery system in Beyond consists of a biopolymer which traps fatty substances (active ingredients such as peptides, alpha lipoic acid, etc.) and slowly releases them into the skin. The biopolymer forms nano size particles which can penetrate the skin. The fact that the nano size particles penetrate the skin is very important since they increase the action of the target substance (active ingredient) in the skin layers. Basically, you get more bang for the buck! Also, since the nano particles penetrate the skin, they help moisturize the skin, something you don't see if you apply Renova or Affirm or any topical cream containing the microsponge system.
